

# VERTI BIM

## BUILDING INFORMATION MANAGEMENT

The electronic tool BIM (Building Information Modeling/ Management) is a great tool for an efficient collaboration. With its help, you can already design partitions and mobile walls in the electronic design project to best suit your interior. They are displayed in 3D as real models, in 2D as drawings and in the reports you can see the individual items with technical data.

Our products are available in the BIM libraries for the Archicad and Revit programmes. You can download the BIM library for free at [www.verti.cz](http://www.verti.cz).
